

Green Button Alliance Member UtilityAPI's New Utility Data Exchange Platform Certified as Green Button Connect My Data (CMD) Compliant

Green Button CMD Standard-compliance Key to Assuring Seamless Access and Sharing of Energy Data While Protecting Customer Privacy

ATLANTA, January 29, 2019 – The Green Button Alliance (GBA), which fosters the development, compliance, and adoption of the industry-standard Green Button energy and water data-access and –sharing protocol, today announced GBA member UtilityAPI's new EE/DER Engagement Platform has been tested and certified as compliant to the industry's Green Button Connect My Data (CMD) and Download My Data (DMD) data-access methods. UtilityAPI's utility data exchange implementation is the first U.S.-based offering to be certified as Green Button CMD-compliant through the Green Button Alliance's

[recently launched](#)

Green Button Testing and Verification Program. As utilities look to offer secure, digital access to customer usage data,

[Green Button CMD-compliant solutions](#)

provide seamless, secure data-access and –sharing, while ensuring customer data privacy.

“As a leading provider of utility data-access and sharing solutions, delivering technology that leverages the full functionality of the industry-standard Green Button protocol—while assuring our customers' data security and privacy—is a priority for us ,” said Daniel Roesler, Founder and CEO, UtilityAPI. *“ Our data exchange platform has been tested and certified as Green Button CMD- and DMD-compliant for Green Button electricity, natural gas, and water usage with billing data and we're now offering a Green Button Certified platform to utilities that provides highly accurate data and a compatible ecosystem. ”*

“As utilities advance their digital strategies to meet customer needs for energy data and increasing regulatory requirements for secure data access and customer privacy, forward-thinking companies continue to look to standards-based, Green Button data-enabled platforms and services ,” said Syed Mir, Chairman, Green Button Alliance. *“Utilities and vendors providing data exchange platforms can utilize the GBA's Testing and Verification program to ensure they are offering standards-based, dependable, turn-key solutions that effectively address the digital data needs of energy and water customers while meeting regulatory requirements. ”*
